

CONSERVATION TALES

Books about wildlife conservation for young readers

Meet Alyssa!

Illustrations by Sami Pfaff

She spends a day with scientists in the forest learning about Cerulean Warblers.

Read more about Alyssa in *"Conservation Tales: The Cerulean Warbler"*

Tips...

- Plant native shrubs and wildflowers in your yard. Songbirds depend on them for food or to support a population of the insects they eat.
- Support land conservancy groups in your area. They help preserve larger areas of natural habitat here and along migration routes.
- Encourage businesses in your city to put reflectors on windows to prevent bird collisions.

Caring for the living things that share our planet starts early. Help children understand the science behind wildlife conservation while discovering potential careers and experiencing inquiry-based science at home.

- **Written for grades 3-5**
- Based on work of real researchers!
- Includes tips for action at home to protect wildlife
- Hands-on Inquiry Science activities for home or schools
